SITUATION SUMMARY

Water Main Break, Hazardous Materials Spill Report #15-5727, Milpitas, Santa Clara County (New/Final)

- On 09/29/15 at 1626 hours the California State Warning Center (CSWC) received notification from Santa Clara Valley Water District that a break in a pipeline caused the release of approximately 50,000 gallons of treated water. The release occurred at 0900 today. The treated water entered Lower Berryessa Creek.
- Per Cal OES Coastal Duty Officer, Local fire department has been notified since this water break will impact their water source to fight any fires in the area. 30 businesses were impacted, but alternate water distribution sources were located for these customers. Santa Clara County (SCC) Water District is on scene and excavating tonight in preparation for inspecting the line tomorrow morning (which is 16 feet under Berryessa Creek). Then SCC Water District and Milpitas Public Works will determine the best approach to repair this main water line. It is estimated to take 2-4 days to pressurized and repair it.

Cal OES Activation Status

- The Cal OES State Operations Center (SOC) transitioned to Joint Field Office (JFO) operations with FEMA to support recovery operations.

Cal EOC Incident – 2014 Drought

WEATHER

WEATHER SYNOPSIS BY REGION:

NORTHERN CALIFORNIA

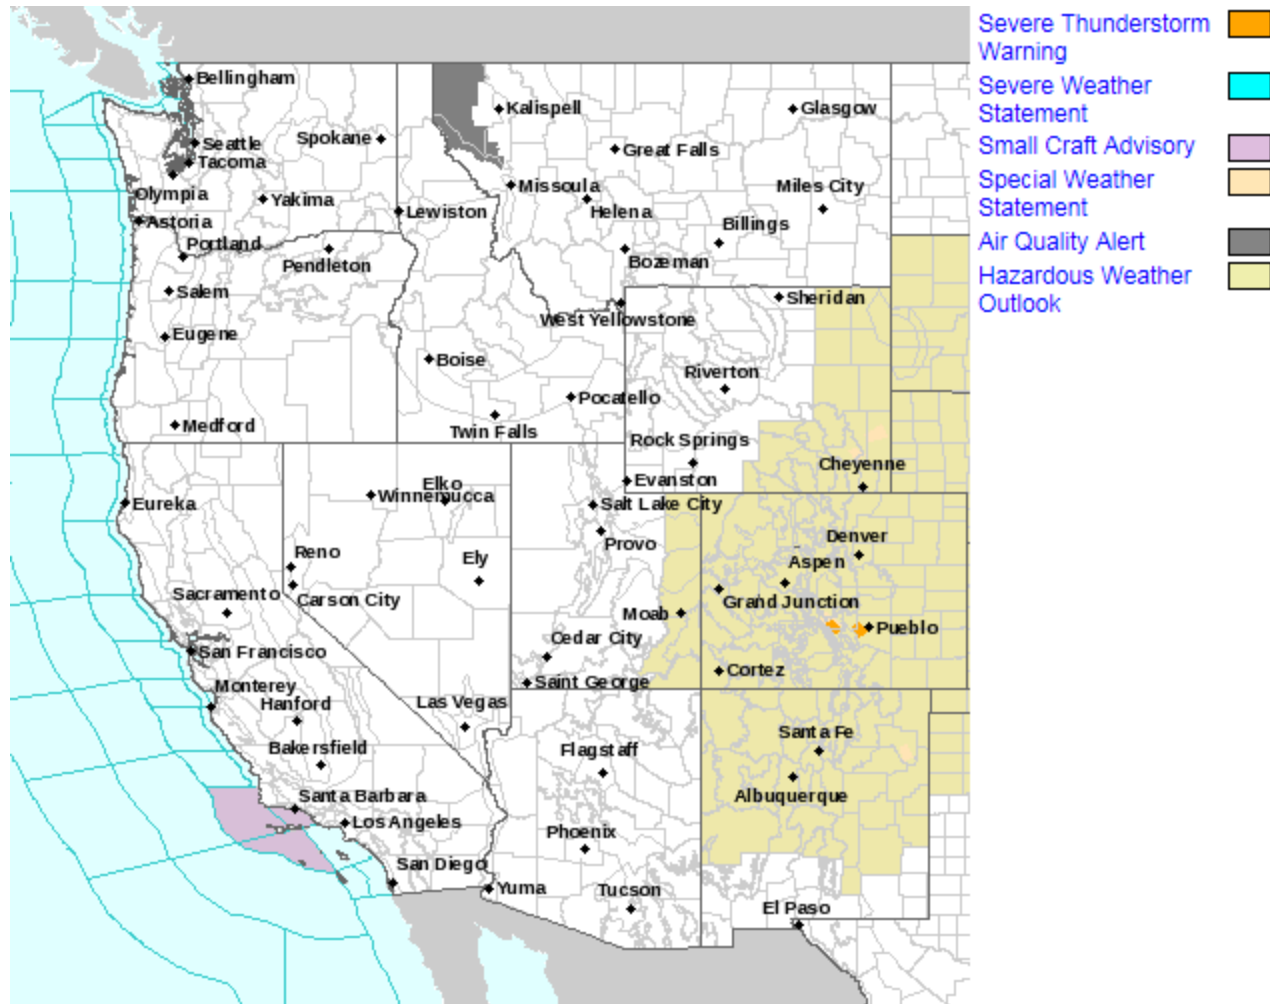

Southwest flow around an off shore cutoff low will continue to stream cloudiness into Central California today. The southeast and far southwest portions of the Northern California will see high cloudiness today, and any showers that might form should be south of Tahoe. The marine layer has deepened under the influence of the low and will be likely to persist all day at the coast. The cutoff low will be on the move slowly eastward tonight and eventually move ashore late Wednesday night and inland Thursday. This is likely to mix out the marine layer for fewer or no areas of low clouds or patchy fog/drizzle. There will be a better chance of showers over all the Northern Sierra late Wednesday night and Thursday. A high pressure ridge rebounds over the region Friday with some relatively light north winds expected (gusts up to around 22 mph). The sequence of events for the weekend is still very uncertain, but the possibility of at least a weak low pressure trough moving into the region from the north is looking more likely. This would cool things down, but appears unlikely to deliver much in the way of precipitation. There might be a continuation of relatively light north to east winds, however, which could lead to rather low relative humidity with poor overnight recovery across the Northern California as a whole, but this too is quite uncertain. In spite of what the weekend pattern ends up being, there is more confidence that early next week will be dry and somewhat warmer again. Afternoon temperatures in the warmest inland valleys should be in the low and mid 80s today through Thursday, then rebound into the low and mid 90s Friday before cooling into the 80s again for the weekend. Overall dry to very dry fuels will continue for the Northern California through the 7-day period even if a relatively strong trough comes in from the north over the weekend. Most areas are at a seasonal low point for all fuels, live or dead. If the off shore flow ends up being fairly continuous over the weekend, then it is likely that the Bay Area marine and Mid Coastal areas could migrate into the very dry category of significant fire potential. No high risk conditions are anticipated through the 7-day period for now, but if sustained off shore flow develops over the weekend, that could change.

SOUTHERN CALIFORNIA

Today and Wednesday, the district will remain sandwiched between a trough located off the Northern California Coast and a strong high pressure ridge over the southwest. Temperatures will remain a few degrees above normal today, especially over Southern California where valley temperatures will continue to reach the low to mid 90s. Winds will be light, except for localized north winds of 15-25 mph this morning and again Wednesday morning across southern Santa Barbara county. Expect minimum relative humidity readings to be in the teens in Central California and the 15-25% range over Southern California. Thursday, the trough will slowly push inland bringing scattered light showers to Monterey County and in the Sierras from Fresno County northward. Rainfall amounts will be under a tenth of an inch. Temperatures will cool 5-8 degrees across all areas and expect gusty west winds of 20-30 mph across the deserts and Owens Valley Thursday afternoon. Gusty north winds may be possible in Santa Barbara County and the I-5 corridor Friday morning following the passage of the trough. Saturday, pressure gradients are expected to turn offshore. This may result in localized offshore winds across portions of Southern California Saturday morning. However, wind speeds are expected to be light. Temperatures will warm significantly across the coastal and inland valleys of Southern California, where temperatures over 90 degrees are likely once again. The offshore winds will decrease by Saturday afternoon. Cooler weather may return for Sunday and Monday as a weak cutoff low ventures into Nevada. Isolated light showers may be possible over the Sierras and deserts early next week. No return of monsoonal flow is expected during the period.
